

At present, ErP Directive (framework directive for the setting of ecodesign requirements for energy-related products) has been carried out for some days. ErP Directive put forward strict eco-design requirement for energy-related products including household appliance, which has great impact for household appliance manufacturers. Manufacturers will meet various confusions:

- Ø What are ErP requirements for household appliance?
- Ø How to prepare Environmental Assessment Report with Life Cycle Assessment (LCA) tool?
- Ø How to develop eco-design of household appliance according to international standards?

In order to clarify above questions, TÜV SÜD will hold a seminar on "European ErP Directive and Environmental Assessment for Household Appliance" during Shunde Export Fair in October and sincerely invite you to attend.

Training Arrangement

Date: 2010-10-18

Time: 14:00-15:30

Address: Conference Room B, 2F, Shunde Exhibition Center

Fee: Free

Main Topic

- Ø Basic Requirement for household appliance according to ErP Directive
- Ø How to prepare ErP Environmental Assessment Report with LCA?
- Ø Eco-design of Household Appliances according to IEC62430
